

**South Bypass Alternatives**

The south Bypass Alternatives route Highway 12 south of Sauk City, diverting traffic from Phillips Boulevard. The potential bypass would likely run south of River Road, across the river, and reconnect in Roxbury. Two alternative south bypass alignments were considered. The Near South Bypass Alternative was selected as the locally-preferred route.

**Phillips Corridor Expanded Alternative**

The Phillips Corridor Expanded Alternative retains Highway 12 on or near current highway alignments. This scenario included road expansion beyond the 2008-2009 Phillips Boulevard project. Alternative approaches may include expanding Phillips Boulevard to more than four travel lanes or forming a one-way pair with Phillips and the parallel Carolina Street.

**North Bypass Alternative**

The North Bypass Alternative routes Highway 12 east and north of the villages, diverting traffic from Phillips Boulevard and the west side portion of existing Highway 12. This bypass option would run primarily along the existing alignments of Highway 188 and Z with expansion.
